## MUHAMMED NAVAS C.K

It is my pleasure to introduce myself as Muhammed Navas, an experienced technologist with over 2+ years of experience. In addition to commercial and educational websites, I have worked on a variety of projects and technologies. I enjoy creating and managing unique looking websites, searching for technical solutions to complex problems.

### MeshiLogic, Senior Angular & React Developer, Kakkanchery Chelembra

July 2021 - Present

Interfaced with clients to identify business requirements, provided effective troubleshooting and remediation for web applications, assessed competitor websites, and successfully identified, diagnosed, and fixed website problems, including performance and accessibility issues.

#### Projects

#### Online Total Campus Solutions

Web-based ERP application for colleges

ERP web application features efficient admission management, a comprehensive student information system, streamlined course and curriculum handling, effective financial administration, and a user-friendly library management system, collectively enhancing the educational experience for all stakeholders involved.

#### Online TCS Department Portal

Student based ERP Web App

As one of the lead developers on the Online TCS project, my responsibilities included designing the basic layout, such as the sidebar mechanism and base styles. I also helped create a reporting tool used for question paper generation that helps in OBE. This tool uses LaTeX to print the output PDF with LuaLaTeX, a TeX-based computer typesetting system. Additionally, I created a request approval system for event management, which helped streamline the event management process and improve the app's overall functionality.

#### Meshil Help App

Company Document Management Web App

The company's web application offers a robust document management solution with features like user management, content management for text, images, and documents, product management for company products and their respective modules' helper documents, and dynamic sidebar content integration based on projects. It also includes a convenient product document viewer for seamless access to critical information

# WorkMate

Company Employee Management

Comprehensive employees management software caters to the specific needs of HR Managers, Employees, Project Managers, and Service Teams. HR Managers can efficiently handle company details, employee management, event management, and leave management, while Project Managers can manage projects and delegate tasks to employees. Additionally, employees have access to their assigned tasks and can request leaves, while the Service Team benefits from a ticketing system for streamlined issue resolution.

# Quac Inc

Learning Resource Sharing Mobile Application

This mobile application is a student-centric resource-sharing platform focused on enhancing learning experiences. It provides access to previous year question papers, study materials, and utilizes AI for predictive question paper generation. Users receive personalized course-based materials through a "FOR YOU" section, and a built-in chat system facilitates discussions, allowing students to clarify doubts and exchange thoughts.

# Hotelhunt

Hotel Management Mobile Application

This mobile app offers a pre-order system for seamless hotel room bookings, allowing customers to find their favorite hotels, explore budget options, and even pre-order food. Additionally, the app includes a comprehensive Hotel Admin Management feature, enabling hotel administrators to access booking details, notifications,category lists, product information, and customer reviews. Furthermore, the app facilitates efficient Product Management, empowering administrators to manage food and room offerings, including their prices and descriptions.
